

- Cat.5E In line Coupler, the most cost-effective way to link countless networking cables.
- Cat.5E In line Crossover Coupler Connect two computers together without using a hub.
- Cat.5E Full Shielded In line Coupler– Fully covered in a metal case to protect signal against dust and elector magnetic noises. Shielded coupler links numerous STP (Shielded Twisted Paired) networking cables together.
- Cat.6 In line Coupler – Faster connection than Cat5e and 1-1 wiring configuration is compatible with both T568A and T56B wiring scheme

The Truon CN-KD-CB23 In line Couplers connect several networking cables together or extend cable runs without sacrificing performance. These in line couplers make it easy to connect multiple cables and make a longer, more functional network setup.

You can solve connectivity issues at home or in a professional setting with the Truon CN-KD-CB23 couplers. Have you ever found yourself in a situation where you need a longer Ethernet patch cable? With these in line couplers, you no longer have to worry about limited cable lengths. Simply connect two shorter cables and create a longer one in seconds.

One of the key features of the Truon CN-KD-CB23 couplers is their gold-plated terminals. This ensures that the connection remains corrosion-free, providing years of reliable use. You can trust that your network will continue to perform at its best, even with multiple couplers in use. These couplers are great for both personal and work use because they can handle heavy use without sacrificing quality.
