

Introducing the CB-C5FA030, a high-quality 30-foot Cat5e Snagless (FTP) Network Patch Cable from Truon. Voice, data, and video distribution are some of the applications that this cable is designed to provide superior performance. With its advanced features and reliable performance, the CB-C5FA030 is perfect for both home and office use.

The CB-C5FA030 is an unshielded (FTP) cable, which means that it does not have any additional shielding. This makes it a cost-effective solution for those who don't require extra protection against interference. However, don't let its lack of shielding fool you – this cable is still a top performer. It meets all Cat5e TIA/EIA standards, ensuring that it will work seamlessly with your existing network setup.

One of the primary benefits of the CB-C5FA030 is its ability to reduce impedance and Structural Return Loss (SRL). Impedance is the amount of electricity that can flow through a wire. By minimizing both impedance and SRL, this cable can deliver a clean, strong signal without any interference or distortion. Applications that require a lot of data, like streaming videos or making phone calls, are a good choice.

CB-C5FA030 30ft (9.14 m) FTP Premium Snagless Cat5e Pre-Made Patch Cord Cables

- Snagless Design
- Reduce Impedance/Structural Return Loss
- Minimizes Near-End Crosstalk Levels
- RJ-45 Connectors
- Comes in eight colors Black, Blue, Gray, Green, Orange, Red, White, and Yellow
