

Businesses and industries that require seamless data or power transfer through multiple channels can use the Connector 4 port. This connector can handle many input and output needs, making it a good choice for complicated setups.

The CN-XU-001 Connector has four 8C ports. This allows for the simultaneous connection of multiple sources, providing enhanced flexibility and scalability for the system. This feature makes it easy to connect different devices and sensors to a single network.

In addition to the multiple input ports, the CN-XU-001 Connector also boasts a single 8C output port. This design consolidates all the inputs and provides a unified output stream, eliminating the need for separate output channels. With this option, it is possible to combine data or power from multiple sources into a single output channel.
