Key Technologies

LumiPower

LumiPower technology extends power and data transmission via a single Ethernet cable up to 3,000 feet without requiring repeaters. Ideal for simplifying installations in larger or more complex environments, LumiPower ensures consistent connectivity and dependable power management throughout security infrastructure.

Up to 90 W Power Output on Supported Port

This switch allows port support for IEEE802.3af, IEEE802.3at, and IEEE802.3bt standards. It has a maximum power output of 90 W per port, making the switch suitable for devices with high power consumption rates.

SFP Uplink Port

This switch has an SFP uplink port for scalable, long-distance, and flexible high-speed connections. It supports both Single-Mode Fiber (SMF) and Multimode (MMF). Depending on the type of SFP (small form-factor pluggable) used, users can connect the switch to other network devices using fiber optics.

Hardened for Harsh Environments

This switch is built with hardened features to withstand harsh environments. These include a wide operating temperature range, a metal enclosure, fanless convection cooling, DIN-rail mounting, redundant power inputs, reverse polarity surge, ESD protection, passive cooling, and long MTBF.
