- 2 Male Outputs
- 2.1 mm DC Power Connectors
- Copper Conductors
- Black Cable
- 12VDC CCTV Power Applications
- 6 in (15.24 cm) Cable Length
- Plug-and-Play Connection
- Sold as 5 Pack

The TR-PIGTAIL2 is a compact 1-to-2 CCTV power pigtail designed to split one compatible 12VDC power connection into two outputs. It features one female input and two male outputs, allowing two compatible security cameras to connect to one suitable power source.

The 6-inch (15.24 cm) cable uses copper conductors and provides a simple plug-and-play connection for CCTV power applications. Its compact design helps installers organize camera power wiring while reducing the need for separate power connections when the selected power source can safely support both cameras.

The TR-PIGTAIL2 is suitable for new surveillance installations, camera upgrades, service work, and replacement applications. Its simple connector configuration makes it a practical CCTV accessory for professional installers and compatible residential or commercial security systems.
