

## Features

- 12 Volt DC, 8 Chanel, 13 AMP, 1.6 AMP per Channel
- Positive Temperature Coefficient (PTC), Auto Reset Fuse
- Don't have to replace burned fuses
- Input Power: AC 115 Volt
- Output Power: 12Volt DC 16 AMP Output
- PTC Protection: each output
- LED Indicators: each output
- Output over-voltage protection
- Over-current protection
- Output short circuit protection

The B-Tron TR-C12VDC08P13A power supply box offers unparalleled protection and convenience for your surveillance system. It's got a bunch of cool stuff to keep your cameras safe and working. Each output of the power supply has an independent PTC fuse and LED indicator, providing individual protection for each camera. This means that if one camera fails, the other cameras will continue working normally.

One of the most important features of the B-Tron TR-C12VDC08P13A power supply box is its short circuit protection. The PTC fuse will automatically open the circuit if there's a short, shielding your cameras from any harm. Without resolving the issue, nothing can be done. This feature not only ensures the safety of your cameras, but also saves you time and effort.

The power supply box has high voltage protection to protect your cameras from voltage surges. This feature not only protects your cameras from damage, but also protects the connected devices. If the power supply box gets too hot, it will turn on self-protection mode to keep your cameras safe. When you fix the power box, it will go back to how it was before.
