

The PBN-TEC PBN-CPIK is a revolutionary cell phone investigation kit. It was designed to assist professionals in retrieving critical data from mobile devices. Police, corporate security teams, and law firms are the ones who should use this complete set of digital forensics tools. It is also useful for other investigators who require the extraction and analysis of data from smartphones and tablets.

This kit supports a wide range of devices, including iPhones, iPads, and Android-based devices. Therefore, it is a versatile tool for professionals. It is user-friendly, making it easy for non-technical individuals to retrieve data from devices. This is beneficial for professional investigations. The PBN-CPIK includes several specific tools that allow for thorough data recovery and analysis. As a result, it is a comprehensive and efficient solution for digital forensics.

One of the main tools included in the PBN-CPIK is the iRecovery Stick. It is feasible to extract data from iOS devices, including iPads and iPhones. The Phone Recovery Stick is its counterpart for extracting data from Android-based devices. These tools are essential for retrieving a wide range of data types. This includes contacts, call logs, text messages, app data, photos, and videos.
