- 4 section light scale to show relative RF signal strength
- Vibration detection mode for complete discreet operation
- Extremely small pocket-sized and light weight detector
- 20MHz to 6GHz wide scanning range
- Utilizing regular AAA battery, easy to get anywhere

Introduction

Used heavily to all levels of law enforcement, private investigators, and for personal use for people that demand to have privacy in their lives! This model is extremely small. RD-10 detects wireless audio and video devices with frequencies between 20MHz - 6GHz. On the back side of this detector, you will find red LED lights that flash intermittently. As you look through the eyepiece, you can see anything that reflects light back to you. If there is a hidden wired or wireless spy camera, even the size of a tiny pinhole, it will reflect light back to you and you can easily locate the hidden camera source even if the camera has the power turned off!

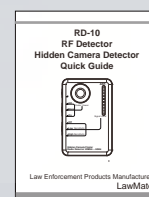

Specification

Item Number	RD-10
Battery Type	AAA Battery
Frequency Range	20MHz - 6GHz
Dimension	80x52x15.5mm
Weight	40g

Standard Accessories

AAA Battery*2
